Based on newly commissioned systematic reviews, the guidelines provide recommendations relevant to inadequate living space (crowding), low and high indoor temperatures, injury hazards in the home, and accessibility of housing for people with functional impairments. In addition, the guidelines identify and summarize existing WHO guidelines and recommendations related to housing, with respect to water quality, air quality, neighbourhood noise, asbestos, lead, tobacco smoke and radon.

4. Da li treba da se renovira: <https://amsdesignerfloors.com/how-often-should-you-reno-vate-your-house/>

If we ought to present an average, you must renovate your house every 15-20 years.

5. Cena renoviranja: <https://cityexpert.rs/blog/en/advice/apartment-renovation-in-serbia-costs-and-tips-in-2025>

How much does it cost to fully renovate a 50 m² apartment? Summing up all the services mentioned, we can estimate total costs at €20,000 - €27,000 when using average materials.

6. Koliko kvadrata je potrebno po broju clanova: <https://alterra.rs/1-soban-2-soban-ili-3-soban-stan-kako-izabrati-idealno-raspored-za-porodicu/>

7. Buka utice na decu:

https://www.unicef.org/media/179276/file/260324_Noise%20Pollution%20layout.pdf.pdf

Noise (defined as unwanted and/or harmful sound) is a preventable environmental health hazard that undermines children's health and key protective factors for their development, including sleep, learning and emotional well-being. Children are particularly vulnerable to the impacts of noise owing to a combination of physiological, developmental and behavioural factors. Their auditory systems are still developing, and their ear canals may transmit sounds differently from those of adults

8. Buka utice na starije: https://www.cdc.gov.au/system/files/2025-10/enhealth-guidance-the-health-effects-of-environmental-noise_0.pdf

Vulnerable groups Particular sub-groups of the population are more vulnerable to experiencing annoyance or adverse health effects from noise. Vulnerable groups include people with particular diseases or medical problems; people in hospital or rehabilitating

at home; people dealing with complex cognitive tasks; those who have a visual or hearing impairment; babies and children; and the elderly. These groups should be considered when recommending noise regulation or protection, including types of noise effects and specific environment and lifestyle factors

9. Pristupacnost za nepokretne: <https://adata.org/guide/planning-guide-making-temporary-events-accessible-people-disabilities>

Accessible routes can include ramps but not stairs.

Components of accessible routes include walking surfaces, doorways, ramps, curb ramps, elevators, and, where permitted, platform lifts.

10. Pristupacnost za starije osobe: <https://www.mdpi.com/2227-9032/13/11/1324>

Falls are increasingly common, and the resulting injuries are recognised as a problem worldwide [1,2]. This presents a serious concern for older adults, given that a third of people aged over 65 and half of those over 80 fall each year.

The Royal Society for the Prevention of Accidents reports that over 60% of accident-related deaths amongst the elderly in the UK are due to falls involving stairs or steps.

Most older adults falls occur indoors.

Stair falls are especially concerning because they are associated with the most severe injuries, are a leading cause of death among older adults, and result in high economic cost.

11. Blizina javnog prevoza je vazna ako nemaju auto:

The tendency of zero-vehicle households to live in cities contributes to their above-average access to jobs via transit.

12. Sta znaci da je javni prevoz blizu:

<https://unstats.un.org/sdgs/metadata/files/Metadata-11-02-01.pdf>

Hence, the access to public transport is considered convenient when an officially recognized stop is accessible within a walking distance along the street network of 500 m from a reference point such as a home, school, work place, market, etc. to a low-capacity public transport system (e.g. bus, Bus Rapid Transit) and/or 1 km to a high-capacity system (e.g. rail, metro, ferry).

13. Lokacija je vazna ako nemaju auto:

<https://www.brookings.edu/articles/transit-access-and-zero-vehicle-households/>

Unfortunately, limited job access via transit in most metropolitan areas leaves many jobs out of reach for zero-vehicle households.

14. Pristupacna lokacija znacenje: <https://www.ube.ac.uk/whats-happening/articles/15-minute-city/>

everything a resident needs in their daily life can be accessed within a 15-minute walk or bike ride. (1,5km by feet or up to 6,5km by bike)

14. Bezbednost je bitna ako imaju decu:

[https://www.unicef.org/lac/sites/unicef.org.lac/files/2019-](https://www.unicef.org/lac/sites/unicef.org.lac/files/2019-10/Child%20Friendly%20Cities%20and%20Communities%20Handbook.pdf)

[10/Child%20Friendly%20Cities%20and%20Communities%20Handbook.pdf](https://www.unicef.org/lac/sites/unicef.org.lac/files/2019-10/Child%20Friendly%20Cities%20and%20Communities%20Handbook.pdf)

Every child and young person lives in a safe, secure and clean environment.
